

Become an Every Child Counts School

Overview

The Every Child Counts programme focuses on improving the mathematics skills of the poorest performing children within Years 1 to 3.

It provides skilled specialist one-to-one or small group teaching for the lowest achieving children, who receive a daily individualised lesson from a specialist 'Numbers Count' teacher for about 12 weeks.

Your Numbers Count teacher (An Early Years / Key Stage 1 teacher with at least two years experience) will undergo rigorous, specialist training, over 7 days across the year, to develop their teaching skills. This allows them to not only support your vulnerable learners, but also contribute to raising whole school standards. They will share with both teachers and teaching assistants their specialist expertise in mathematical development, common barriers to learning and effective pedagogy.

Outcomes

- So far show children who were working over a year behind their chronological age make an average of over **14 months** progress within 22 hours of teaching over a 3 month period.
- The children continue to learn at a rate exceeding that of their peers over the next 6 months. Many of these children were not predicted to achieve level 2 in KS1 SATs but 76% of the BwD children on the programme attained level 2c or higher.
- Many teachers have seen the children's confidence grow beyond recognition, often showing improved attitudes to learning right across the curriculum.

A teacher we recently trained as a Numbers Count Teacher had this to say:

' Thanks for giving me a brilliant year's training, guidance and support. It's made me grow as a teacher and given me confidence to go forward.'
